## APXS Results

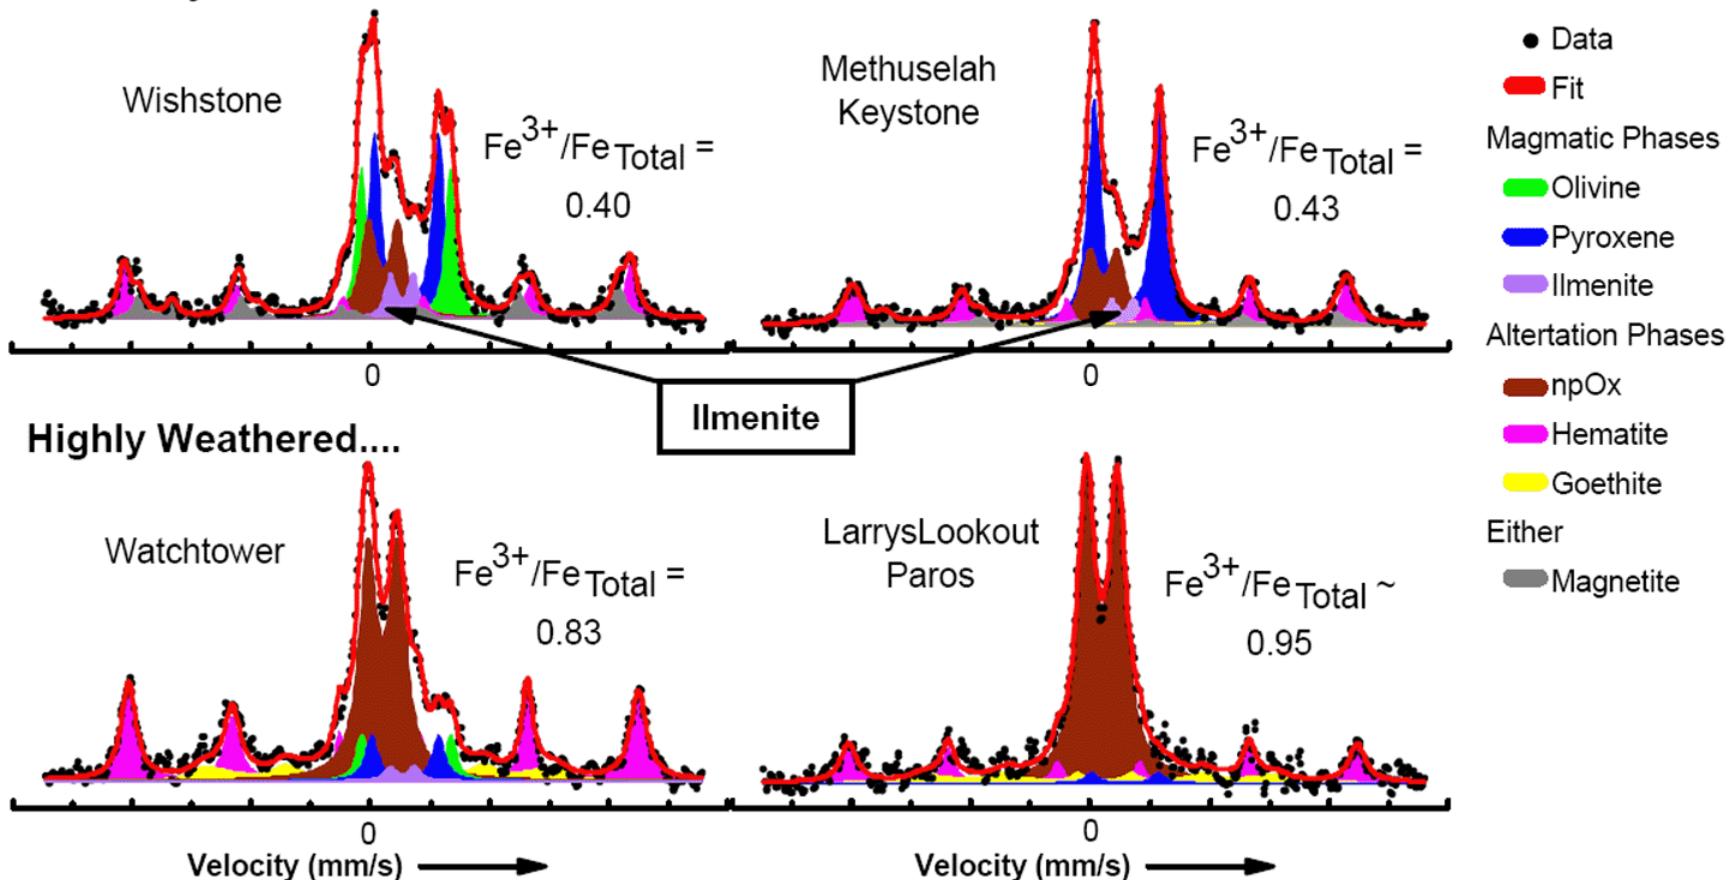

Athena

Mars Exploration Rover Mission

Relatively Unweathered....

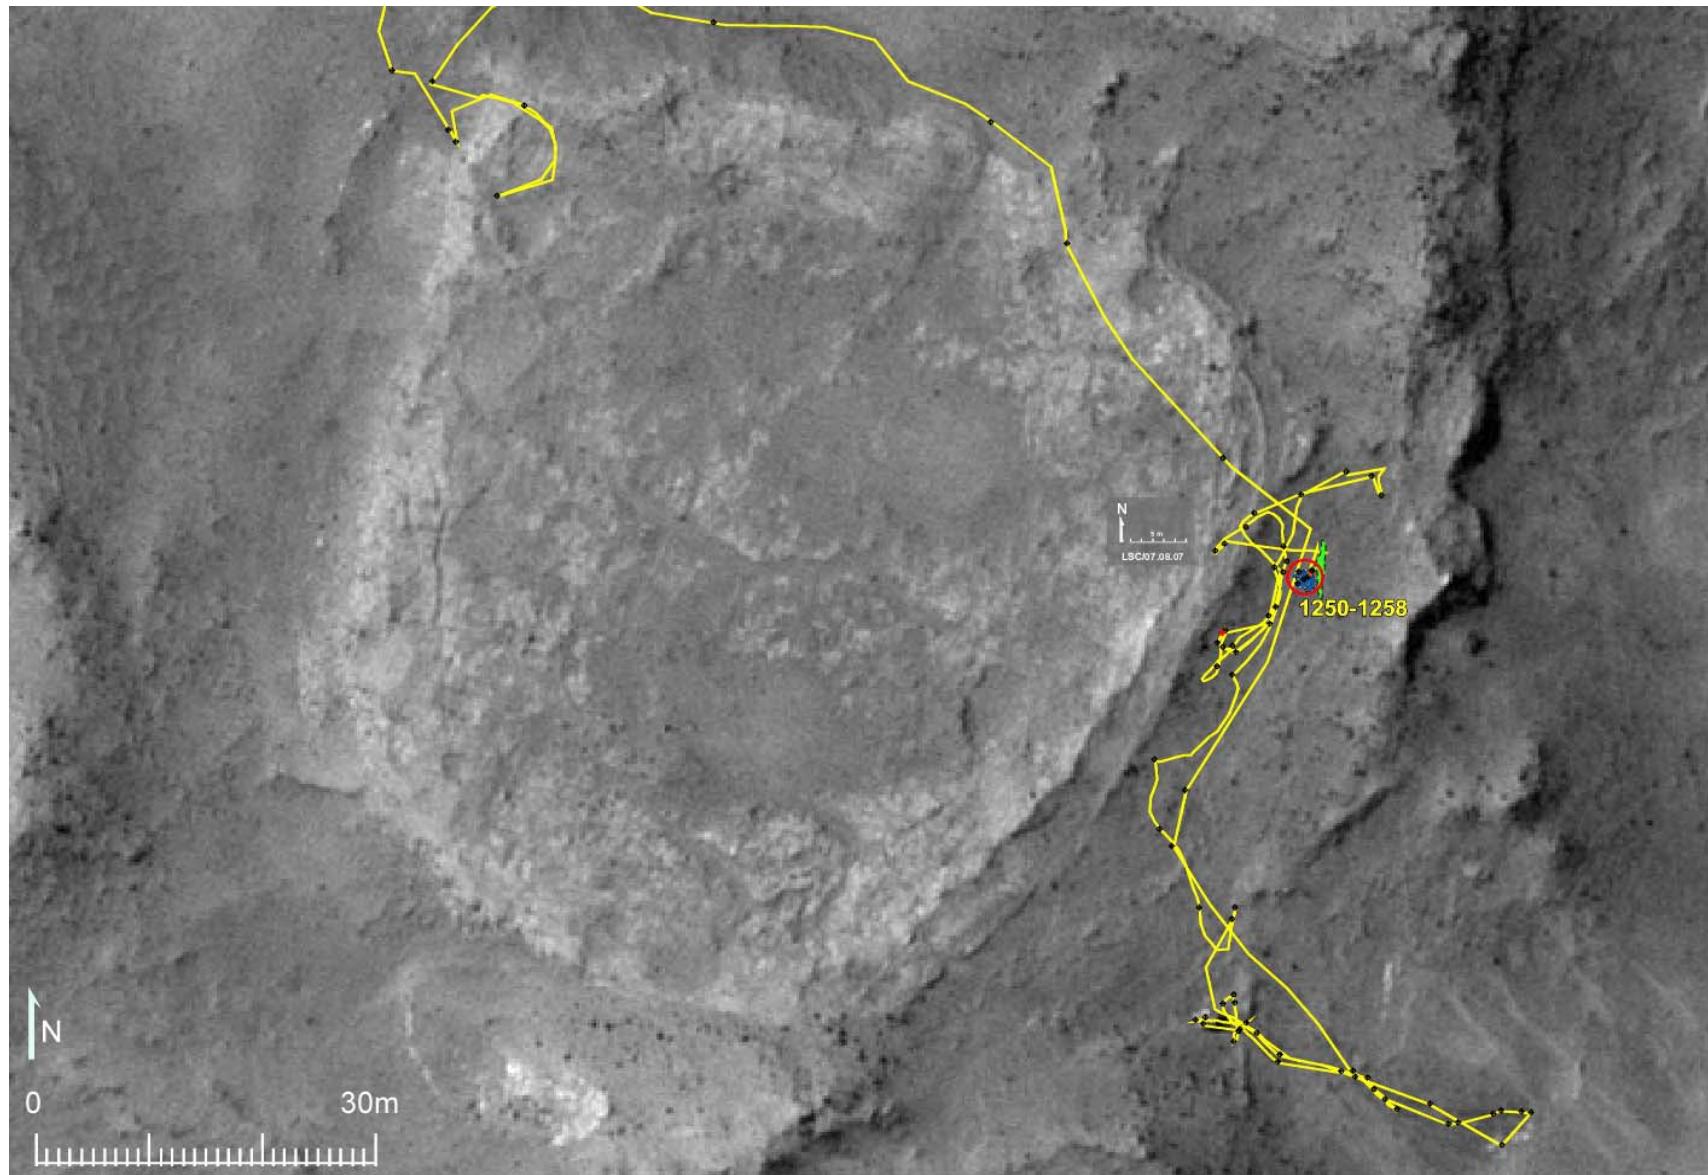

1. First identification of the mineral ilmenite ( $\text{FeTiO}_3$ )
2. Weathering at constant chemical composition implies a low water to rock ratio

Cape Verde

Duck Bay

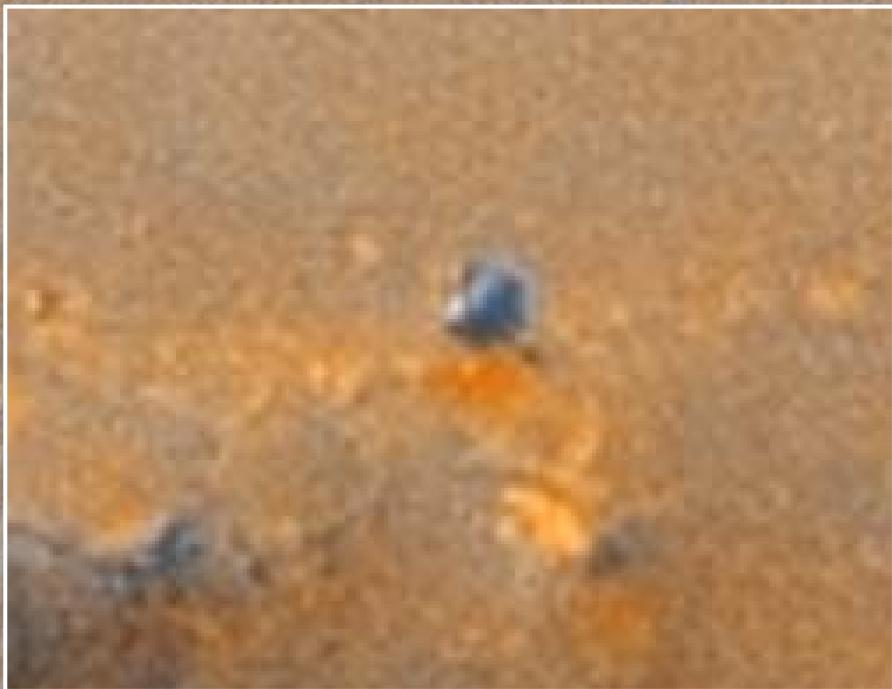

A photograph showing a coastal area with distinct geological features. The left side of the image shows a light-colored, textured surface with vertical sedimentary layers and small orange-yellow mineral deposits. A prominent dark, irregularly shaped landmass extends from the right side towards the center. The boundary between the two areas is a sharp, irregular line. The word "Opportunity" is written in white capital letters above the dark landmass, with a thin white arrow pointing downwards towards its upper edge. The words "Cape Verde" and "Duck Bay" are also written in white capital letters, positioned near the bottom right corner of the dark landmass.
