

AMERICAN ACADEMY
OF ARTS & SCIENCES

**BUILDING RESILIENT AND ETHICAL SUPPLY CHAINS FOR A POST-COVID WORLD
BREAKOUT ROOMS**

Instructions:

Note: Depending on attendance, groups may change and/or combine.

Each group will be asked to assign a rapporteur to summarize the discussion and present to the full group following the breakouts. An Academy staff member will also take notes.

Objective:

The objective of each breakout session is to identify both the vulnerabilities and challenges, as well as possible solutions for each topic. Please discuss your perspective on the multi-dimensional barriers, such as ethical or logistical challenges, for each of the following topics: medical and scientific supply chains, workers' protections, food supply chains, and the security and resiliency of supply chains with a particular focus on correctives and what we can learn from these challenges in order to build more resilient and ethical supply chains. Questions to consider include: Where is there overlap between topics or challenges? Is additional information needed to address these problems? What are the lessons learned from COVID-19? What elements are necessary to building resilient and ethical supply chains?
