

## **New Hampshire's Humanities Majors at Work: What They Earn, What They Do**

In the first study of its kind, the Humanities Indicators developed a series of [profiles](#) about the career outcomes of humanities majors residing in New Hampshire and the other 49 states, drawing on data from the U.S. Census Bureau's American Community Survey.

### **Among the key findings:**

- The 25,710 humanities graduates residing in New Hampshire and working full-time account for 5% of the state's full-time workforce (looking across all the states, the average share is 4%). Bear in mind that only 42% of the state's full-time workers have a bachelor's degree, so humanities graduates account for approximately 12% of that share.
- The median earnings of humanities majors in the state's full-time workforce (\$72,646 per year) are 44% higher than the median earnings of workers with just a high school degree (\$50,293). One in four humanities graduates in the state earns more than \$107,051.
- The median earnings for humanities majors in New Hampshire are similar to or higher than the earnings of graduates from the behavioral and social sciences, arts, and education. Their earnings are lower than those of graduates from the natural sciences and business (by 14% and 11%, respectively). Engineering graduates earn substantially more than college graduates from every other field, both nationally and in New Hampshire.
- The unemployment rate for humanities majors is similar to other college graduates in New Hampshire at 2%, and lower than the rate for those in the labor force with just a high school degree (4%).
- Humanities graduates in New Hampshire are most likely to be found in education occupations, with 18% employed in that category.
- Older humanities graduates make considerably more than their younger counterparts. Full-time workers aged 22–26 have median earnings of \$38,966, but that rises to \$77,245 for those aged 30–59.
- Humanities graduates in New Hampshire with an advanced degree have an 18% boost in median earnings (rising from \$67,058 for full-time workers with just a bachelor's degree to \$78,985 for workers with a higher degree).
- Areas of employment with substantial shares of humanities graduates include the legal profession (where humanities graduates account for 35% of bachelor's degree holders employed in those jobs) and museum/library professions (where they are 34% of college graduates in those occupations). Approximately 15% of college graduates working in the not-for-profit sector majored in the humanities.

Note that unless otherwise specified, earnings and unemployment estimates are for workers aged 25–59.

Earnings and occupation are not the only measure of success in one's career or life. See the recent [Workforce and Beyond](#) report from the Indicators for measures of job and life satisfaction for humanities graduates.

These profiles are being released as part of the National Humanities Conference, which starts in Indianapolis on October 26, 2023. See the project [home page](#) for additional details about our methodology, as well as supplemental information later in the fall, including earnings estimates by gender, race/ethnicity, and humanities discipline.

Finally, if you have any questions about this profile, the larger project, or the Humanities Indicators, please contact Robert Townsend (the Director of Humanities, Arts, and Culture Programs at the Academy) at [rtownsend@amacad.org](mailto:rtownsend@amacad.org).
